

NORTH DAKOTA CROP, LIVESTOCK & WEATHER REPORT

North Dakota
Agricultural
Statistics Service

Cooperating With:
NDSU EXTENSION SERVICE,
ND AG WEATHER NETWORK (NDAWN)
and
UND AEROSPACE REGIONAL WEATHER
INFORMATION CENTER

Released: November 4, 2002
For Week Ending: November 3, 2002
ND-CW4402

General: Another week of poor drying conditions slowed harvest progress throughout the state, according to the North Dakota Agricultural Statistics Service. A string of cooler than normal temperatures and mostly cloudy conditions has forced producers to harvest crops at higher than normal moisture levels. A statewide average of 4.4 days were suitable for fieldwork. Topsoil moisture supplies were rated 13 percent very short, 28 short, 54 adequate and 5 surplus.

Crops: Soybean, corn and sunflower harvest continued to progress behind both last year and the five-year average (1997-2001). As of November 3, 95 percent of the soybeans had been harvested, compared to 99 percent last year and the average of 98 percent. Seventy percent of the corn and 58 percent of the sunflowers have been harvested. Because of high moisture levels, many producers have been drying their grain before they can store or deliver it to market. The poor drying conditions have also delayed the completion of the dry edible bean harvest. Fall tillage, fertilizer and chemical applications have stopped in some areas because the ground has frozen.

Livestock: Producers continued to move cattle in from summer pastures. Sloughs and stockponds have frozen in most areas and many producers have begun feeding hay to their cattle. Pasture and range conditions were rated 37 percent very poor, 29 poor, 21 fair, 12 good and 1 excellent. Stockwater supplies decreased compared to last week and were rated 20 percent very short, 22 short, 57 adequate and 1 surplus.

Weather: October finished off with temperatures 15 degrees below normal. Average temperatures ranged from 21 to 29 degrees. In the middle of the week, the southwest and south central regions reached into the mid-40s. The coldest overnight temperature was zero degrees in Williston, Dickinson, Bowbells and Watford City.

The east central and northeast accumulated the most precipitation, 0.12 and 0.10 of an inch, respectively. The rest of the state received approximately 0.03 of an inch. The northeast region remains 3.83 inches above average precipitation accumulation with the rest of the state very dry. The south central and southwest are the driest with 6.13 and 5.87 inches below average.

Outlook, November 4-10: On Monday and Tuesday expect daily highs in the upper 30s in the east and lower 40s in the west with overnight lows in the lower to mid-20s. Tuesday night and early Wednesday there is a chance for snow flurries. Wednesday through Friday will bring temperatures in the mid-to-upper 40s for the western part of the state and 35 to 45 for the east. Overnight lows will be in the upper 20s across the state. Over the weekend expect daily high temperatures to fall to the mid-to-upper 30s across the state.
